

DEMANDBASE

Job Description: Software Engineering Intern

Location: Hyderabad

Introduction to Demandbase

Demandbase is the only pipeline AI platform that empowers GTM teams to automate growth at scale. With a unified view of data, insights, actions, and outcomes, B2B enterprises can seamlessly align and execute their account-based GTM strategies with confidence. Thousands of businesses trust Demandbase to maximize revenue, minimize waste, and consolidate their data and tech stacks – all in one platform.

As a company, we're as committed to growing careers as we are to building world-class technology. We invest heavily in people, our culture, and the community around us. We have also continuously been recognized as One of The Best Places To Work in the San Francisco Bay Area by Fortune, and One of The 60 Best Companies To Sell For by Selling Power. Our offices are located in San Francisco, New York, Austin, Seattle, India, and the United Kingdom.

About the Role

Demandbase is seeking a Software Engineering Intern to join our engineering team and help build intelligent, scalable, AI-powered products and systems. This internship is ideal for someone who is passionate about software development, curious about emerging AI technologies, and excited to apply AI tools and techniques to solve real-world engineering problems.

As an intern, you will work alongside experienced engineers on impactful projects, contribute to product development initiatives, and explore how AI can improve developer productivity, product experiences, automation, and engineering workflows. We are looking for someone who combines strong software engineering fundamentals with an experimentation mindset and enthusiasm for AI-driven innovation.

What you'll do

Software Development

- Contribute to the design, development, and delivery of scalable software applications and services.
- Write clean, maintainable, and efficient code following engineering best practices.

- Collaborate with engineers and cross-functional teams to build production-quality features and tools.
- Participate in code reviews, technical discussions, and Agile development processes.

AI-Driven Engineering & Innovation

- Explore and apply AI-assisted development tools to improve engineering productivity and development workflows.
- Build prototypes, tools, or features leveraging AI/LLM capabilities to solve real-world business and engineering problems.
- Experiment with emerging AI technologies, frameworks, and APIs to enhance product experiences and automation.
- Contribute ideas around intelligent workflows, developer tooling, automation, and AI-powered user experiences.

Learning & Collaboration

- Learn modern software development practices, cloud technologies, and scalable system design principles.
- Work closely with mentors and peers to continuously improve technical and problem-solving skills.
- Stay current with advancements in AI, software engineering, and developer productivity tools.

What we're looking for (Required)

- Pursuing a Bachelor's or Master's degree in Computer Science or a related technical discipline.
- Strong fundamentals in Data Structures, Algorithms, Object-Oriented Programming, and problem-solving.
- Good programming skills in at least one language such as Java, Python, Scala, C++, or Go.
- Passion for software development and building scalable applications.
- Strong curiosity and hands-on interest in AI technologies and AI-assisted software development.
- Experience using AI tools (e.g., ChatGPT, GitHub Copilot, Claude, Cursor, or similar) for coding, problem-solving, automation, or project development.
- Demonstrated ability to build projects, prototypes, automations, or solutions using AI technologies or APIs.
- Strong analytical thinking and willingness to experiment with new technologies.
- Effective communication and collaboration skills.
- Quick learner with a growth mindset and eagerness to work in a fast-paced engineering environment.
